

Leadership in Local Government – Building Globally Competitive Cities

2-9 March 2012

Stellenbosch, Cape Town

This high level leadership and management development course was designed to provide an opportunity for senior political and management teams in the metropolitan municipalities to reflect on the challenges facing them and to develop a workable programme to achieve rapid improvements in city performance.

Our cities are critical engines of economic growth and development. They are now home to the majority of South Africans and are a beacon to many across the continent. We have much work to do in building our cities, from repairing the damage of apartheid to addressing current challenges of supporting growth and attacking poverty. More than anything, our cities require dynamic and visionary leadership that is able to meet these challenges.
