

## The Role of Public Policy in Private Sector Development

20 - 24 April 2015

Cape Town

Private sector performance is a key factor driving any country's growth and development; the design and implementation of public policies can either stimulate or inhibit sustainable growth in the private sector. This course explores how government can encourage and enable the private sector to play a more effective, productive role in economic growth and development and addresses some of the challenges faced by public sector leaders as they foster economic growth in politically-charged environments.
